

Some plants need just the basics.  
Others require all the features.  
Everyone wants to have options.

If your stacker interrupts feeding during stack or bundle change, you could be sacrificing up to 19% of your productivity, wasting valuable material and reducing profitability.

ZFI - Zero Feed Interrupt – allows you to recapture this lost time and material and turn it into profit!

- No feed interrupt during bundle or stack change.
- Production continues at speed during change.
- Ensures consistent printing through change for all orders and speeds.
- Total sheet support throughout cycle regardless of size, shape, outs, or speed.
- Safe, fully automatic operation. No need for operator intervention.
- Potential to add \$117,776 to your bottom line annually.

Geo. Martin upgrades are designed for optimum compatibility. For more information on ZFI or any other Geo. Martin products, visit [www.geomartin.com](http://www.geomartin.com) or call 1-510-652-2200.
