

# Profit by any other name would still smell as sweet.

**Your customers will refer to it as luster, depth and durability.  
Your accountant however will use a much shorter term.**

Few things can add as much value to finished goods as a press equipped by JB. UV and water-based varnishes provide a superior gloss, full print protection and scuff resistance. Our exclusive line of short-wave infrared dryers optimize trapping, eliminate marking and smearing, all while printing as well as diecutting in a single pass on any sheet including the highest hold-out stocks. And JB dryers allow this to happen at top machine speeds.

Could your operation benefit from this sweet smell? Call us and we'll show you how. Ask for our free production analysis which compares UV versus water-based varnish.
