

Performance and profit regardless of the size of the run: Vpak.™

With the Goss Vpak web offset press you'll consistently profit no matter how big or small the press run. Why? Because job changes can be done quickly compared to flexo and gravure. Run speeds are twice as fast as sheet fed offset. Add to that, offset plates are typically 5% of the cost of flexo plates or gravure cylinders. Vpak even approaches and, in some cases, exceeds the efficiencies of digital for short runs. As the marketplace trends toward more and shorter print runs, the Vpak is the profitable solution.

Designed specifically for packaging, the Vpak can be configured to run film, foil and paperboard substrates. Vpak brings Goss renowned reliability and print quality to the packaging market and won the prestigious Intertech Technology Award in 2014.

Want to learn more about performance you can bank on? Call or email us to arrange for a cost to print analysis.

In a world of shorter runs, don't get caught short on profit.
