

There's something far more expensive than adding our patented Scrubber® Technology.

Like losing customers over scrap.

As the number of automated filling lines increases, the tolerance for scrap in your loads drops to zero. So, if you think adding our revolutionary, patented and virtually scrap-free stacker technology is an investment you're not willing to make, perhaps your customers will tell you something different. Maybe, "So long" or "See you later."

Our unique Scrubber Technology is a set of exclusive features that are re-defining run speeds and delivering the highest quality cleanest output in the history of rotary die cutting.

Learn more about the virtual elimination of scrap on new stackers or as an add-on to an existing installation.
